

Aussie Born and Bred

The Mongrel Story

Victor Footwear makes Mongrel Boots in Australia. Indeed this locally owned and run, family company has been making boots for Australian workers since 1930. Unlike some brands that promote Australian ownership and an Australian image but fully import their boots – Mongrel Boots are made in Sydney using state of the art equipment with some parts and materials imported to ensure the highest quality and competitive costs. Local manufacturing and development allows us to maintain excellent stock levels and ensure world-class technology and innovation for both safety and comfort. While the vast majority of our products are made in Australia, should any styles or components require manufacture overseas in order to be competitive - they are made using the safety and quality codes followed in Australia, under the supervision of Victor Footwear manufacturing executives.

The Brand Promise

The Mongrel Boots brand was first launched in 2000. It was seen on just one style and only promoted on the boot box label. The idea came from a desire by Victor to associate its boot making skills with its Australian heritage. Indeed, Mongrel work boots are Aussie born and bred. The name soon developed into a complete range, and Victor has added leadership to the Mongrels promise.

Design Leadership

An example of Mongrel leadership was as the originators of the zip side style for work boots. Introduced in 2006 with just one style – our “Zip-Siders” are now category leaders in Australia and included in virtually all of our Mongrel ranges. This catalogue introduces a new and improved sole design and scuff cap range as part of our dedication to continuous improvement.

The extensive Mongrel Boots range means there is a boot to suit your needs. We are proud to present the 2015/2016 range of Mongrel Boots.

We've given Mongrel Boots a complete upgrade from the sole up

Enhanced ToughSider sole design

ToughSider

The new Mongrel's ToughSider sole design features a deeper, wider tread pattern that assists grip performance and longevity by helping to keep the sole clear of damaging rubble. The ToughSider design has been applied to both our TPU/PU and Rubber ranges.

Enhanced AirZone Comfort System

AIRZONE COMFORT SYSTEM

The upgraded design features an extended AirZone Comfort System in the heel for increased cushioning and comfort. The AirZone System works by trapping air in the heel cavity. By making the area larger we have created what amounts to a bigger sweet spot to enable the sole to significantly reduce degenerative heel strike. This enhanced shock absorber effect increases comfort and reduces tiredness and in turn increases safety.

Computer aided Roller Sole Technology

Roller Sole Technology creates a rolling action while walking. This rolling action increases comfort and reduces fatigue for the wearer. Originally designed for high tech sports shoes the Mongrels computer aided design is based on the use of the boot in work situations. Like AirZone, it is featured on both our TPU/PU and Rubber soles.

OrthoTec – The Inner 'soul' of a Mongrel Boot

Mongrel Boots are supplied with one of three specially designed innersoles from our OrthoTec range. Using a special foam and construction to aid cushioning, air circulation and longevity. The range includes a PU, Gel and Air versions designed to meet the need of each boot in the Mongrel range. The result is greater comfort and reduced moisture resulting in less odour and harmful fungus and bacteria.

PU

Our PU innersole features a thick soft structure matched to a design featuring interconnected air holes that assist the closed-cell foam to circulate air throughout the boot while creating extra absorbency. This style features in most of the boot ranges.

Gel

The lighter weight of our S Series, which has been designed using sports technology including duo colour soles, has been matched with a special PU Gel innersole. This new and improved innersole features a larger gel pad to provide extra shock absorbency and increased comfort all round.

Our TPU/PU ranges feature quality materials inside and out

Mongrel's ToughSider sole comes in a TPU/PU dual density combination. The Thermoplastic Polyurethane outer layer provides better grip, comfort, flexibility and wear resistance than regular polyurethane. It's not only lighter and tougher but also has a longer shelf life. The PU inner sole means greater comfort and lightness. There is also a combination of quality materials throughout the boots construction.

PU Air

Our value for money T Series features OrthoTec open foam PU in a deceptively simple but long wearing and comfortable design. The air blown PU assists in air circulation and moisture control. The nature of its construction also means that the innersole will maintain its shape and not flatten out significantly, even over time.

A tougher Mongrel all round

ZipSider Success Story

Mongrels originated ZipSiders in 2006. Launched with just one style the innovation grew into one category – the ZipSiders range. However, the increasing popularity of ZipSiders now sees it featured across almost all our ranges. ZipSiders are now available in rugged rubber sole styles suitable for the mining industry to our non-safety range where comfort, looks and ease of use are most important.

• Available in women's fittings

Dual density TPU/PU Scuff Cap

An integral part of our upgrade of the ToughSider sole has been the development of a new tougher scuff cap design. So successful was the new design that Mongrels now manufacture a specialist scuff cap range. The range is based on research into the most popular styles used in rugged work situations. The new styles give a high degree of toe-cap protection increasing the life of the boot.

Dual density PU/Nitrile Rubber Outsole

The Mongrel R Series Rubber range is the choice when things get hot or conditions rugged. The rubber version of our ToughSider sole features a light, flexible polyurethane midsole with a heavy-duty nitrile rubber outsole. A 6mm deep tread pattern makes it ideal for worksites such as mining or in heavy construction environments. Matched with our high quality OrthoTec PU innersole – the R Series lets you take on the toughest jobs in safety and maximum comfort. And as for the heat – the Nitrile Rubber sole is heat resistant up to 300 degrees.

Duo colour Dual density TPU/PU Sport

Lightweight can be a critical requirement in many work situations. Occupations that require a worker to be on their feet for long periods but not exposed to harsh conditions often have comfort as the most important design element. Our Sport range provides a long wearing but lightweight combination of aluminium toe-cap and duo colour TPU/PU ToughSider sole which is further enhanced with our OrthoTec Gel innersole.

Dual density TPU/PU Security/ Non-Safety

If there is one occupation that demands workers remain on their feet - it is the security industry. The requirement for long-term comfort is high. It is also one of the few occupations that specifically require soft cap boots be used. Based on the Mongrel non-safety range our SE range features all the technology required to keep wearers comfortable and alert.

Mongrel Boots – Accessories

OrthoTec PU footbeds

(sizes 4-14)

Mongrel polyurethane cushion footbeds provide superior shock absorption, arch support, ventilation, anti-bacterial properties and stability for your feet whilst incorporating our AirZone comfort system for maximum comfort.

Cotton socks

(pack of 12 pr)

Mongrel cotton socks are truly a Mongrel with a pedigree. Made from 95% cotton, they will comfortably be your Mongrel's new best friend.

Bamboo socks

(pack of 12 pr)

Make a world of difference to your feet with a pair of Mongrel bamboo socks! Featuring anti-bacterial, odour resistant and thermo regulating properties whilst promoting use of sustainable materials.

Work boot laces

(120cm & 140cm) (pack of 10 pr)

Replacement work boot laces. Available in black/brown, wheat and black. Wheat also available in 150 cm.

Suede & nubuck protector

(display pack - 6 bottles)

A highly effective water and oil repellent to keep your suede or nubuck Mongrel's dry and promote longer life from your boots.

Aussie Born and Bred

Mongrel Safety Boots

These Mongrel Safety Work Boots are made to Australian Standard AS/NZS 2210.3.2009 Class1* and are a basic safety boot marked category SB. The boots are certified by TUV Rhineland Australia P/L, www.tuv.com. Mongrel Safety Boots are suitable for general industrial and agricultural use. The boots will feature either a TPU/PU sole or a Nitrile Rubber PU sole which have specific usage conditions. The sole type appears on the boots and on the inner tag.

TPU/PU

The maximum temperature in which TPU/PU soles can be used – intermittent contact up to 130°C and continuous contact up to 110°C.
Chemical contact – avoid use with strong acids and alkalis >10% concentrations such as hydrochloric and sulphuric acids and caustic soda. The soles are oil resistant.

Nitrile Rubber/PU

For Nitrile Rubber/PU soles – the maximum temperature for usage range is up to 300°C. The sole is acid, oil and heat resistant. The boots have a removable inner sole. For safety certification all testing is carried out with the inner sole in place and the boot should only be used with the inner sole in place for maximum safety – in particular shock absorption. Should the innersole need to be replaced it is important to purchase one of a similar standard. Replacement innersoles can be purchased from sales outlets carrying the Mongrel Boots range. A list of stockists is available via our website – www.mongrelboots.com.au

Unauthorised alterations

Any unauthorised alterations to footwear such as mechanical stretching or adding vent holes are discouraged as they may • take the footwear out of compliance with this standard • void any approval or certification of the footwear • reduce the effectiveness of the footwear. Where alterations of the footwear are contemplated, advice should be sought from the manufacturers and approving authorities.

Comfort and safety

It is essential that the boots are properly fitted for maximum comfort and safety. Of special importance is to allow room under the cap for your toes to move. Your toes should not come into contact with any part of the toe cap. You should allow around 5mm between your toes and the back of the cap. Your heel should fit neatly into the back of the boot so that when walking, your boots do not move up and down on your heel. The boot should fit comfortably around your foot.

Maximise the life of your Mongrel boots

Store in dry and well ventilated environments – air conditioned environments are ideal. Drying your boots should be at normal room temperature. Avoid forced heat drying and direct sunlight. Regular cleaning is recommended. Remove dirt and grime from the upper with a damp cloth and then apply boot polish or dubbin depending on leather type. With suede or nubuck leather, clean with a suede or nubuck brush and apply Mongrels Suede & Nubuck Protector. Soles should be cleaned regularly with water and allow to dry. The life of your boots is related to the working conditions to which they are exposed, the care you give them and frequency of use.

* Only applies to Mongrel Safety range.
